Software Engineer, Skillshare; New York – June 2016 - Dec 2016

Established SEO best practices and destroyed spam, boosting organic traffic to skillshare.com by 66% in 6 months and raising average keyword ranking by 300%.

Built an incredibly well received teacher-facing analytics dashboard.

Helped build out the new Kubernetes-backed infrastructure and migrations from OpsWorks, including zero-downtime deployments, distributed logging, and more. Lead the cluster-migration strategy for upgrading Kubernetes to the latest stable version with 0 downtime.

Established testing best practices and refactored key code paths to minimize technical debt.

Technical Product Manager, Delta.NYC @ Civic Hall Labs; New York – November 2016

Delta.NYC is Civic Hall Labs' initiative to bring technologists in New York together with nonprofits and charities that need technical assistance. I worked as a technical project manager along with a backend engineer and frontend UI/UX designer to build out a new presence for HeartMob (http://iheartmob.org) along with a soon-to-be released method of combating harassment on Twitter.

Software Engineering Intern (Developer Platform), Google; New York – May 2015 - July 2015

At Google I worked on Swift quickstarts and sample code for developers, wrote software for a bullet time rig made of Nexus 6 phones, and introduced Apps Script to the wonderful world of modern web development.

Software Engineering Intern, IFTTT; San Francisco – February 2015 - May 2015

At IFTTT I campaigned for and implemented Two-Factor Authentication. I primarily worked on the platform team, building the partner-facing analytics/metrics interface.

hackNY Fellow & Mentor, hackNY; New York – Summer 2014, Summer 2015

I lived and worked in New York for a summer, hanging out with an amazing set of people and mentors. We talked with leaders in the NY tech scene and did awesome stuff 24/7. The next summer I mentored a group of 34 hackNY Fellows as they thrived in the NY tech scene. We spent the summer visiting startups, exploring the city, scavenger hunting, and hanging out, building awesome friendships and projects along the way.

Software Engineering Intern; Magnetic, York – May 2014 - August 2014

I built out a new method of acquiring context from pageviews, massively increasing the amount and quality of information Magnetic can use to do intelligent ad bidding.

Software Engineering Intern, Grooveshark; Gainesville, Florida – Summer 2013

At Grooveshark (RIP), I built and managed an internal analytics dashboard while living and working with some of the best people I've known.

Skills

Frontend React, Polymer, Backbone, VanillaJS
Backend Rails, Meteor, Node/Express, Golang, Python
Mobile Swift/Obj-C, React Native
DevOps/Infra Kubernetes, AWS, Heroku, Docker, CI/CD, (micro-)service oriented architecture
